## Personal Statement

After undertaking a 3-month specialised tech course, I developed advanced skills and experience in the area of software development and I have learned how to work well both in a pair programming as well as on my own while showing significant determination to overcome any challenges and issues. I developed valuable and well-considered technical concepts, web applications and features, and I was considered a benefit to the group of developers and a major contributor to the dynamics of the learning and working process. In addition to that, I excelled at presenting to clients and was appraised both by them, and the tutors of the program, for my work ethic, professionalism and ability to collaborate with others. Furthermore, my abilities to build a clean code, file structuring and separation of concerns, were amongst my strengths while learning. Since a young age, I have always shown a love and passion for technologies and software development, and I believe that technologies provide us with infinite opportunities for development and a better life, and I am dedicated to continuing exploring and proving this. Therefore, I am eager to put my expertise, skills and knowledge, as well as genuine interest, into my new job role, and I am looking forward to continuing developing in a reputable and respected company like yours as a **Junior Front-End Developer**.
